

Custom Roll Forming

★★★ DREISTERN

Forming success. Together.

Behind every **Possibility.**

Profiles that don't exist yet. **Plant engineering**
that's already prepared for the future.

Today's production facility for tomorrow's products – ready for the unknown – that's your challenge. We solve it with technology that makes everything possible: interchangeable tool sets, quick changeovers, punching, welding, or other processing steps, depending on the requirements of the product being manufactured.

What's changing right now

Product cycles and batch sizes are getting smaller, while the demands on equipment technology are increasing. A single tool, short production runs, completely new requirements for the next order. In this business, flexibility is not a luxury – it's the foundation.

Profiles from our production lines

For virtually any profile application. From small to large, individually tailored to the needs of our customers.

Why DREISTERN

- Design engineers who think ahead to the unknown
- Interchangeable tool sets and well-designed setup concepts
- Punching, welding, assembly – integrated inline or as standalone processes
- Systems that grow with you over decades

Who works with us

Custom roll formers that need to remain flexible for their customers – and that's exactly why they rely on us.
