Electrical Industry

DREISTERN
Forming success. Together.

Behind every **Connection.**

Data that no one sees.
Profiles that ensure it gets through.

DREISTERN
Forming success. Together.

Developing new products without jeopardizing mass production – that's your challenge. We solve it with profiles that remain consistent year after year: control cabinet profiles, cable trays. Dimensionally accurate, stable, and reproducible.

What's changing right now

Data centers are the backbone of the digital world – and they're growing faster than suppliers can keep up. AI and the cloud are driving demand, while at the same time, requirements for energy efficiency and reliability are increasing. Added to this is the path the data itself takes: high-voltage and undersea cables. And finally, the energy required for all of this: server racks built with system profiles – manufactured with precision and ready for installation.

Profiles from our production lines

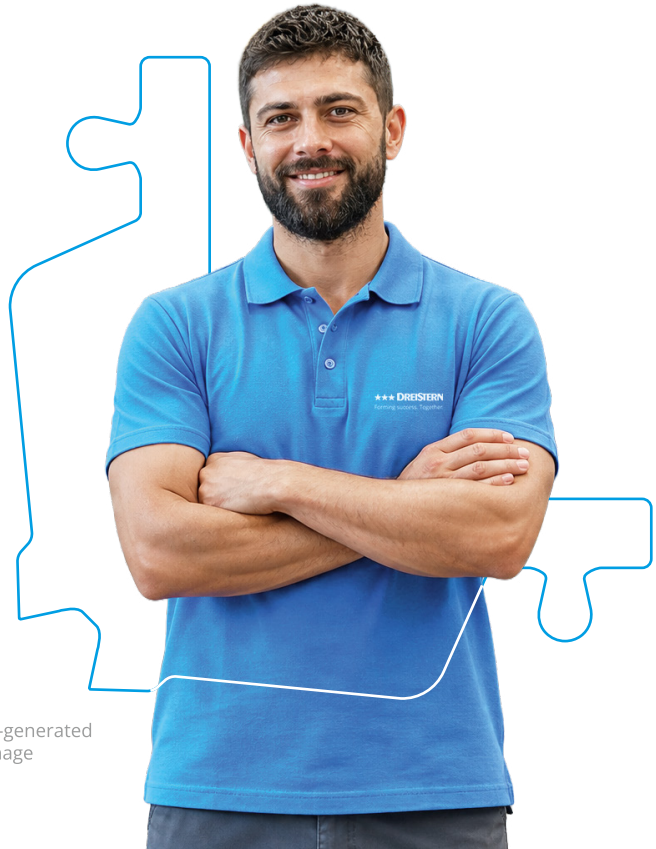

Control cabinet profiles, slide-out rails for servers, server rack structures, and cable trays. Also, components for high-voltage and submarine cables.

Why DREISTERN

- Control Cabinet Construction and Cable Management we specialize in
- Profiles for server racks in data centers
- Sheathing for high-voltage and data cables
- Modular systems that scale with your production volumes
- Test Center: try it first, then decide

Who works with us

Market leaders in the electrical industry who are rolling out their infrastructure worldwide. But also startups that value the experience of a supplier.
