Storage & Logistics

DREISTERN
Forming success. Together.

Behind every **Delivery.**

Packages that arrive on time.
Shelving designed specifically for that purpose.
Automation that works thanks to precision.

DREISTERN
Forming success. Together.

Millimeters make a difference of tons – that's your equation. We solve it with precision-dimensioned profiles and tight tolerances, in compliance with EN 15512 and EN 15620. We also produce custom punchings with reliable process control. Less scrap, faster assembly, and trouble-free operation for decades.

What's changing right now

High-rack warehouses are growing taller and becoming fully automated. Shuttle systems and storage and retrieval machines move quickly and require tight tolerances; inaccurate profiles lead to collisions, troubles and wear. In high-rack warehouses, inaccurate profiles are unacceptable.

Profiles from our production lines

Uprights, beams and boxbeams. Rack shelfs and rack rear panels, roller and guide rails.

Why DREISTERN

- Design engineers who have been delivering dimensional accuracy for decades
- Profiles also for high-rack warehouses and loads in the metric ton range
- Compliant with EN 15512 and EN 15620
- Modular systems for any batch size

Who works with us

Leading manufacturers of automated warehouse and racking systems worldwide.
